

Next Generation IoT Devices

IoT Devices | Optical Sensors | Custom Cameras

CloudM brings the next generation of custom designed, fit-for-purpose optical sensors and intelligent camera systems.

This generation of IoT devices are capable of autonomy, self learning and any other custom behaviour that may be required.

We engineer custom hardware and software for unique problems, whether that be border security, industrial control or any other domain. With our expertise in optical and vision based devices and background in engineering deep learning software, we provide our clients with a unique capability to develop any kind of optical or electronic device with a supported software eco-system.

- Turnkey development
- IP creation and protection
- R&D services
- Project management
- Large scale production management
- Software ecosystem (Cloud, Mobile Apps, Firmware)

Strategic automation is the key to staying ahead, and at CloudM we understand where and how intelligent devices and systems can be deployed for a myriad of tasks from quality control to distribution.

We can help take your idea or problem from abstract to a concrete product.

Beyond off the shelf solutions
