

# PhantomEye

Remote Land Border Security | Perimeter protection | Coastal Watch

PhantomEye remote telemetry system makes use of cutting edge computer night vision analysis and satellite telemetry to automatically notify security officials, drones and other autonomous systems to take required action... within seconds of the event.

PhantomEye Night Vision System continuously and autonomously scans for threats in remote border and coastal areas. As soon as a potential threat is detected it notifies an upstream system. The system can also be deployed for perimeter, installations and industrial security.

The system can be customized according to the detection, reporting and security requirements.

- Easy to setup
- Requires 15W solar panel and battery
- Interchangeable lenses – panoramic, zoom etc.
- Low power satellite link.
- Custom sensing capability
- IP 67
- Remote area stand-alone deployment

PhantomEye processes the image and finds the essence of the image.

The result is transmitted over satellite, WiFi, LoRaWan or cellular radio link as a short text message, along with the time and location.

“Boat approaching, E of Lat -30.23, Lng 150,23, 1505 hrs 12 May 2016”

Coastal area intruder detection
