

# PhantomEye

Intelligent homes and work spaces

Home Security | Aged Care | Assisted Living | Personal Security

PhantomEye brings cutting edge, real time, image and vision analysis for anomaly detection and predictive security. Unlike, today's passive security systems, PhantomEye is always watching for signs of trouble.

PhantomEye is an intelligent security system with several configurations to detect signs of life, motion, state and number of occupants. Fall detection, intruder detection, unusual patterns and gesture recognition. Secret duress gestures can be pre-configured in the system.

Since images are only processed on the device and never transmitted or stored (optional), the product brings enhanced privacy allowing for use in homes, aged care facilities, hospitals, prisons and other work places.

- Plug n Play setup
- WiFi or Cellular connectivity
- Night operation possible with IR mode
- Custom configurations possible
- Optional learning mode

**CLouDM**  
IoT - Cloud Computing - M2M

PhantomEye processes the image and finds the essence of the image.

The result is transmitted as a text message or email to a care giver, control room or a family member.

*"15:15 hrs 12 May 2016 – occupant motionless in chair for last 30 min. Played alarm, no success."*

**Visual sensing = continuous security**
